| <b>M/s QATAR DUTY FREE (QDF)</b><br>Attn: Contracts / Procurement Department<br>Doha, Qatar<br><b>DATE : 03 / 09 / 2026</b> | <b>QREF: 03/09/26-1</b><br><b>SUBJECT: Comprehensive Annual Maintenance Contract – HVAC, Kitchen Exhaust, Grease Trap &amp; High-Level Cleaning Services</b><br><b>Location: Harrods Tea Room, Msheireb – Doha</b><br><i>Ref: Appendix A – Scope of Work (HVAC Maintenance &amp; Cleaning Services)</i><br><b>TECHNICAL &amp; COMMERCIAL PROPOSAL</b> |
|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Dear Sir,

With reference to the above and further to your Appendix A – Scope of Work for HVAC Maintenance and Cleaning Services at QDF F&B – Harrods Tea Room, Msheireb, we thank you for the opportunity and are pleased to submit our Technical and Commercial Proposal for a three (3) year Annual Maintenance Contract.

Metri Engineering Services W.L.L. (MES) has previously assessed and quoted the HVAC installation at this facility and is fully familiar with the equipment, its configuration and the operational constraints of the restaurant. Our proposal has been prepared strictly against the requirements of Appendix A, and we have clearly identified the scope inclusions, exclusions and qualifications so that the commercial basis is unambiguous for both parties.

This document is issued in two parts:

- Part 1 – Technical Proposal: covered equipment, service delivery methodology, maintenance programme, proposed Service Level Agreement, reporting and HSE.
- Part 2 – Commercial Proposal: schedule of prices, spare parts commercial basis, inclusions, exclusions, clarifications and terms.

Yours faithfully,

**Metri Engineering Services W.L.L.**

Fayez Metri (55572793 / 70500311)

## PART 1 – TECHNICAL PROPOSAL

### 1.0 THE REQUIREMENTS

QDF requires a comprehensive maintenance and cleaning service covering the HVAC systems, exhaust ventilation, kitchen hood and extract duct systems, grease trap and high-level cleaning of the restaurant areas at Harrods Tea Room, Msheireb. The contract objective is continuous, safe and uninterrupted operation of the covered equipment through planned preventive maintenance, corrective maintenance, emergency response, monthly inspection, reporting and spare parts management.

The core maintenance frequency defined in Appendix A is quarterly (four times per year), supported by monthly inspections, 24/7 emergency response and defined service levels. Our proposal is structured on that basis.

### 2.0 COVERED EQUIPMENT – ASSET SCHEDULE

Appendix A does not include an equipment schedule. Our proposal is therefore priced on the asset base previously established at this facility, listed below. The asset schedule shall be confirmed by a joint condition survey within fourteen (14) days of award, and the contract value adjusted pro-rata should the actual asset count differ.

| # | Equipment Description                                               | Qty     | Type of Service                     | Services / Year |
|---|---------------------------------------------------------------------|---------|-------------------------------------|-----------------|
| 1 | Fan Coil Units (FCU)                                                | 16 Nos. | Preventive & Corrective Maintenance | 4               |
| 2 | Fresh Air Handling Units (FAHU)                                     | 2 Nos.  | Preventive & Corrective Maintenance | 4               |
| 3 | Air Cooled Condensing Units (ACCU)                                  | 2 Nos.  | Preventive & Corrective Maintenance | 4               |
| 4 | Ecology Units (Electrostatic Precipitator)                          | 2 Nos.  | Preventive & Corrective Maintenance | 4               |
| 5 | Exhaust Fans                                                        | 3 Nos.  | Preventive & Corrective Maintenance | 4               |
| 6 | Kitchen Hoods, Grease Filters, Exhaust Ducts & Fan Assemblies       | L.S.    | Degreasing, Cleaning & Disinfection | 4               |
| 7 | Grease Trap                                                         | L.S.    | Cleaning, Grease Removal & Disposal | 4               |
| 8 | Restaurant Ground Floor & First Floor                               | L.S.    | High-Level Cleaning                 | 4               |
| 9 | Air Curtains – quantity, make and location not stated in Appendix A | TBC     | Preventive & Corrective Maintenance | 4 (Provisional) |

### 3.0 SERVICE DELIVERY MODEL

---

The services under this contract are scheduled preventive activities supplemented by corrective and emergency attendance on a case-by-case basis. Accordingly, MES does not propose permanently site-based (resident) personnel at Harrods Tea Room. This model is neither technically necessary nor commercially efficient for an asset base of this size, and the cost of two full-time site-based engineers would be borne by QDF without any corresponding improvement in service outcome.

Instead, MES will assign a dedicated account team, permanently available and mobilized on demand, comprising:

- Maintenance Supervisor –attends all quarterly PPM visits, all monthly inspections, and all Severity S1 events.coordinates all site attendance, permits, gate passes and reporting; single point of contact for the QDF Duty Manager.
- HVAC Technicians (multi-skilled) – mechanical and electrical, drawn from our standing maintenance division.
- Specialist duct, hood and grease trap cleaning crew – mobilized for the quarterly deep-cleaning cycles.
- High-level cleaning crew – with access equipment, trained for cleaning of decorative and glass finishes.
- 24/7 emergency response – single hotline number, manned continuously including Fridays and public holidays.

All personnel attending site will report to the Duty Manager on arrival and on completion, and will not be replaced on this contract without prior QDF approval. Personnel performance will be reviewed jointly with QDF on a quarterly basis, in line with Clause 1 of Appendix A.

*Should QDF specifically require permanently site-based manpower, this can be quoted as a separate, clearly identified line item and is not included in the prices in Part 2 of this proposal.*

### 4.0 MAINTENANCE PROGRAMME

---

#### 4.1 Quarterly Planned Preventive Maintenance (PPM) – 4 visits per year

##### **HVAC Equipment (FCU, FAHU, ACCU, Ecology Units)**

- Cleaning of air filters; washable and aluminium filters cleaned, dried and refitted; filter condition reported against static pressure drop.
- Cooling coil cleaning using approved non-corrosive chemical, comb straightening of fins as required.
- Drain tray, condensate drain line, U-trap and strainer cleaning and flushing; verification of free drainage.
- Fan motor inspection, bearing lubrication, current draw measurement against nameplate.
- Belt inspection, tension adjustment, replacement and pulley alignment.
- Motor insulation resistance (megger) testing and vibration measurement, with results recorded on the service sheet.

- Thermostat inspection and calibration; VAV and actuator functional check.
- Damper operation inspection, cleaning and adjustment.
- Inspection and tightening of all electrical control wiring, contactors, terminals and control panel components; thermal check of connections.
- Ecology (electrostatic) unit: cell removal, washing and drying, insulator cleaning, HV section inspection, ionising and collector plate condition report, carbon media condition assessment.
- ACCU: condenser coil cleaning, refrigerant pressure and superheat check, compressor operating current, safety device testing.
- Functional testing, performance verification and optimisation of the complete system.

#### **Exhaust Ventilation Systems**

- Inspection and servicing of exhaust fans, impeller cleaning and balancing check.
- Fan bearing inspection and lubrication.
- Fan motor performance and current testing.
- Electrical connection inspection and tightening.
- Airflow verification at grilles and hood face; exhaust system adjustment where required.

#### **4.2 Kitchen Hood & Duct Degreasing, Cleaning and Disinfection – 4 times per year**

- Cleaning and degreasing of kitchen hoods and canopy surfaces.
- Removal, soaking, degreasing and refitting of grease extraction filters.
- Cleaning and degreasing of accessible kitchen exhaust ductwork through existing access panels.
- Cleaning and degreasing of exhaust fan assemblies, housings and impellers.
- Disinfection of hoods, ductwork and exhaust system with approved food-safe disinfectant.
- Issue of a Duct & Hood Cleaning Certificate with before-and-after photographic report.

#### **4.3 Grease Trap Maintenance – 4 times per year**

- Complete grease trap cleaning and pump-out.
- Removal and disposal of accumulated grease and solids to designated area / approved disposal contractor.
- Inspection of grease trap baffles, covers and general condition.
- Reporting of defects and recommended corrective actions.

#### **4.4 High-Level Cleaning – 4 times per year**

Carried out following each quarterly PPM cycle, covering the Restaurant Ground Floor and First Floor dining area:

- Ceilings – vacuuming, dust removal and wiping; no finger marks or residual soiling on completion.
- Lighting fixtures and lamps – cleaned with high care; electrical supply isolated prior to work and reinstated only after completion and Duty Manager confirmation.

- Decorative wall finishes and stair-side feature walls – cleaned with extra care using approved mild chemicals to avoid damage.
- Glass partitions, internal and external wall glass – cleaned to a spot-free finish.
- High-level side counters and tea caddies – maintained dust free.
- Terrace green canopy – cleaned and maintained dust free.
- Furniture and decorative features – vacuumed, dusted and wiped.
- Floors vacuumed on completion; all water and waste disposed of in the designated area within the premises.
- Proper access by erected ladders / mobile access platforms; full PPE and barricading of the work area.
- Same-day verification with the Duty Manager and issue of a before-and-after photographic report.

#### 4.5 Monthly Inspection – 12 times per year

Independent of the quarterly PPM, MES will attend site monthly to inspect the HVAC systems, exhaust systems, kitchen hood systems, ductwork, grease traps and electrical control systems. Each inspection report will record observed defects, equipment condition, recommended corrective actions, priority classification and photographic records.

#### 4.6 Corrective Maintenance & Emergency Response

MES will attend, diagnose and rectify all faults on the covered equipment throughout the contract period, on an unlimited call basis, in accordance with the Service Levels in Clause 5.0. This includes fault diagnosis, repair and restoration, removal and refitting of defective components, operational testing and emergency breakdown response 24 hours per day, 7 days per week including Fridays and public holidays.

**All labour, supervision, tools, testing equipment and transport for corrective and emergency works are included in the contract price. Replacement spare parts are supplied under the commercial basis set out in Clause 8.0 and Part 2.**

### 5.0 PROPOSED SERVICE LEVEL AGREEMENT

Appendix A contains two conflicting requirements: Clause 7 requires emergency response within four (4) hours, while Clause 10 requires a fifteen (15) minute response and sixty (60) minute restoration for Severity S1. A fifteen-minute response is achievable only with permanently site-based manpower, which is neither proposed nor, in our assessment, necessary for this scope.

MES therefore proposes the following Service Level Agreement, which is realistic, measurable and enforceable for both parties, and which we commit to contractually:

| Severity             | Definition                                                                                      | Acknowledgement   | On-Site Attendance | Restoration Target |
|----------------------|-------------------------------------------------------------------------------------------------|-------------------|--------------------|--------------------|
| <b>S1 – Critical</b> | Total loss of cooling or ventilation to a trading area; kitchen exhaust or hood system failure; | <b>30 minutes</b> | <b>4 hours</b>     | 24 hours           |

| Severity           | Definition                                                                                                                                                                                          | Acknowledgement | On-Site Attendance | Restoration Target                         |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|--------------------|--------------------------------------------|
|                    | electrical trip of HVAC equipment; water leakage from HVAC equipment; any condition preventing the restaurant from trading.                                                                         |                 |                    | (interim/temporary measure within 8 hours) |
| <b>S2 – High</b>   | Partial loss of performance; failure of a single FCU or exhaust fan; temperature or airflow deviation; abnormal noise or vibration; air curtain performance reduction; controller or display fault. | 2 hours         | 8 working hours    | 48 hours                                   |
| <b>S3 – Medium</b> | Minor defect not affecting trading; thermostat, sensor or control adjustment; minor leak; deferred maintenance observation raised during inspection.                                                | 4 working hours | Next working day   | 5 working days                             |
| <b>S4 – Low</b>    | Cosmetic or non-operational items; damaged casing, grille or louver; general infrastructure observations; items suitable for rectification at the next scheduled visit.                             | 1 working day   | 3 working days     | 10 working days or next scheduled PPM      |

#### SLA Conditions

- The SLA clock commences from written notification (e-mail or the nominated MES WhatsApp/hotline number) containing a clear description of the fault and the equipment affected.
- Provision of a working temporary or interim solution that restores trading capability constitutes restoration for SLA purposes.
- Restoration times exclude any period during which MES is awaiting: QDF written approval of quoted spare parts; OEM manufacture, import or customs clearance of non-stock items; site access, gate pass, permit-to-work or an agreed equipment shutdown window; or instructions from QDF.
- Where a spare part is not available ex-stock in Qatar, MES will advise the lead time at the point of quotation and will propose an interim measure where technically possible.
- Non-execution of a scheduled PPM visit shall not be classified as Severity S1. Where a visit cannot proceed for reasons attributable to MES, it will be rescheduled and completed within ten (10) calendar days at no additional cost.
- Severity items in Appendix A relating to walk-in chillers and freezers, equipment door hinges and gaskets, and water leakage from sinks concern catering refrigeration and plumbing equipment. These are not part of the HVAC scope and are excluded; MES is pleased to quote for them separately.
- Any liquidated damages or service credit regime shall be mutually agreed in the contract and shall not exceed five percent (5%) of the quarterly invoice value in any quarter, and five percent (5%) of the annual contract value in aggregate in any contract year.

## 6.0 REPORTING & DELIVERABLES

---

MES will maintain a full documented record of all activities. The following deliverables are included in the contract price:

- Annual PPM schedule issued at contract commencement and agreed with the QDF Duty Manager.
- Quarterly Preventive Maintenance Report – service checklist per asset, equipment operating condition, maintenance performed, recommendations, spare parts requirements, before-and-after photographs.
- Corrective Maintenance Report – fault description, root cause analysis, corrective action taken, spare parts utilised, before-and-after photographs, equipment restoration confirmation.
- Monthly Inspection Report – defects observed, condition, recommended actions, priority classification, photographic records.
- Work Order Closeout Documentation – actual manpower hours utilised, spare parts consumed, calibration records, vibration testing records, motor insulation resistance records, safety inspection records and outstanding recommendations.
- Duct & Hood Cleaning Certificate and Grease Trap Cleaning Report after each cleaning cycle.
- High-Level Cleaning Certificate with before-and-after photographic report.
- Annual Asset Condition Summary Report, including remaining life assessment and replacement recommendations.
- Spare Parts Recommendation Schedule, updated annually.

## 7.0 HEALTH, SAFETY & ENVIRONMENT

---

- Compliance with all applicable Qatar regulations and with Qatar Airways and QDF safety procedures and site rules.
- Method statements, risk assessments and job safety analyses submitted prior to mobilisation and for each cleaning cycle.
- Permit-to-work procedures observed for all works, including hot works, working at height and electrical isolation.
- Full PPE for all personnel at all times; barricading and signage of all work areas within the restaurant.
- Material Safety Data Sheets (MSDS) submitted for every chemical prior to use; only food-safe approved chemicals used in kitchen and dining areas.
- Electrical supplies isolated prior to all cleaning activities and reinstated only after completion and Duty Manager approval.
- All waste, grease and cleaning water disposed of in designated areas within the premises or through approved disposal contractors.
- Gate pass and site access processing handled by the MES office.

- Valid third-party workmen's compensation insurance maintained throughout the contract period.

## 8.0 SPARE PARTS MANAGEMENT

---

In accordance with Clause 12 of Appendix A, MES shall provide and manage all spare parts required for corrective maintenance. MES will:

- Identify, specify and source all required spare parts, using genuine OEM parts or approved equivalents.
- Submit a written quotation, supported by the supplier invoice, for QDF approval prior to procurement.
- Apply a maximum mark-up of five percent (5%) on the supplier invoice value.
- Carry out all removal, installation, testing and commissioning of the replacement part at no additional labour cost, as this is included in the contract price.
- Record all parts consumed in the work order closeout documentation and maintain the running spare parts consumption register.
- Maintain a small holding of fast-moving items (belts, fuses, cable joints, thermostats, sensors) to protect the S1 restoration target.

**Important:** the cost of spare parts and replacement components is **not included** in the lump sum contract prices in Part 2. Spare parts are reimbursable at supplier invoice value plus five percent (5%) handling, invoiced separately against QDF-approved quotations.

Where QDF elects to procure spare parts directly under its reserved right, MES will install and commission the part at no additional cost, but MES shall carry no liability for the quality, compatibility, performance or warranty of parts not supplied by MES, nor for any consequential delay to the SLA restoration target.

## PART 2 – COMMERCIAL PROPOSAL

### 9.0 SCHEDULE OF PRICES – BILL OF QUANTITIES

All prices are in Qatari Riyals (QAR), exclusive of spare parts, and are firm and fixed for the full three (3) year contract period with no escalation.

| #                                                | Description of Service                                                                                                                                                                                                                                                                                                                                                                                 | Unit     | No. / Year |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|------------|
| 1                                                | Quarterly Planned Preventive Maintenance of all HVAC equipment – 16 FCU, 2 FAHU, 2 ACCU, 2 Ecology Units, 3 Exhaust Fans. Including filter cleaning, coil cleaning, drain/U-trap/strainer cleaning, motor lubrication, belt and pulley works, thermostat calibration, damper testing, electrical inspection, vibration and insulation resistance testing, performance verification and full reporting. | L.S.     | 4          |
| 2                                                | Monthly inspection, condition monitoring and reporting of HVAC, exhaust, kitchen hood, ductwork, grease trap and electrical control systems, including photographic defect report and priority classification.                                                                                                                                                                                         | L.S.     | 12         |
| 3                                                | Corrective maintenance, breakdown attendance and 24/7 emergency response – unlimited calls. Labour, supervision, tools, testing instruments, consumables and transport. (Spare parts excluded – refer Item 12.0.)                                                                                                                                                                                      | L.S.     | 12         |
| 4                                                | Grease trap cleaning, complete pump-out, grease and solids removal and disposal, condition inspection and report.                                                                                                                                                                                                                                                                                      | L.S.     | 4          |
| 5                                                | Kitchen exhaust hood, grease filter, ductwork and exhaust fan assembly degreasing, cleaning and disinfection, including cleaning certificate and photographic report.                                                                                                                                                                                                                                  | L.S.     | 4          |
| 6                                                | High-Level Cleaning of Harrods Restaurant Ground Floor and First Floor – ceilings, lighting fixtures, decorative and feature walls, glass partitions, internal and external wall glass, side counters, tea caddies, terrace green canopy, furniture and decorative features. Including access equipment, chemicals, vacuuming and photographic report.                                                 | L.S.     | 4          |
| 7                                                | Preventive & corrective maintenance of Air Curtains. Provisional allowance based on an assumed 4 Nos. units, to be adjusted against the confirmed count at the joint asset survey.                                                                                                                                                                                                                     | Per Unit | 4          |
| <b>TOTAL ANNUAL CONTRACT VALUE = QAR 140,200</b> |                                                                                                                                                                                                                                                                                                                                                                                                        |          |            |

### 9.1 Three (3) Year Contract Summary

| Contract Period        | Total (QAR)       |
|------------------------|-------------------|
| Year 1                 | 140,200.00        |
| Year 2                 | 140,200.00        |
| Year 3                 | 140,200.00        |
| <b>TOTAL – 3 YEARS</b> | <b>420,600.00</b> |

**Total price for ONE (1) YEAR comprehensive AMC (excluding spare parts): QAR 140,200.00**

**Total price for THREE (3) YEARS comprehensive AMC (excluding spare parts): QAR 420,600.00**

## 10.0 OPTIONAL ITEMS – NOT INCLUDED IN THE CONTRACT VALUE

The following are not required by Appendix A and are therefore excluded from the prices above. They may be ordered separately at the fixed rates below at any time during the contract period.

| # | Description                                                                                                                                                                                                                   | Unit            | Rate (QAR)   |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|--------------|
| 1 | FCU supply and return ductwork cleaning (16 Nos. FCU) – complete system, including access panels, brushing, vacuuming, disinfection and cleaning certificate. Not called for in Appendix A; recommended once every 12 months. | Per Occurrence  | 12,000.00    |
| 2 | Additional High-Level Cleaning visit beyond the four (4) contractual visits.                                                                                                                                                  | Per Visit       | 10,000.00    |
| 3 | Additional kitchen hood, duct and exhaust degreasing and disinfection beyond the four (4) contractual visits.                                                                                                                 | Per Visit       | 6,500.00     |
| 4 | Motor rewinding, compressor or fan motor overhaul carried out at workshop, including removal, transport, workshop works, refitting and testing.                                                                               | Per Case        | On Quotation |
| 5 | Full Testing, Adjusting and Balancing (TAB) of the air distribution system with certified report.                                                                                                                             | Per Occurrence  | On Quotation |
| 6 | Permanently site-based (resident) maintenance manpower, if required by QDF.                                                                                                                                                   | Per Man / Month | On Quotation |

## 12.0 SPARE PARTS – COMMERCIAL BASIS

In line with Clause 12 of Appendix A:

- All spare parts and replacement components are EXCLUDED from the lump sum contract prices and are reimbursable by QDF.
- Spare parts will be charged at supplier invoice value plus a maximum handling mark-up of five percent (5%).
- Supplier invoices will be submitted with every spare parts quotation for full transparency.
- No spare part will be procured or fitted without prior written QDF approval, except in an emergency where a minor item is required to restore trading, up to a value of QAR 1,000 per event.
- All parts will be genuine OEM or approved equivalent, supplied with the manufacturer's standard warranty.
- All labour to remove, fit, test and commission replacement parts is INCLUDED in the contract price at no extra charge.
- Spare parts are invoiced separately from the quarterly maintenance invoice, on completion of the works.

For clarity, the following items listed in the Recommended Spare Parts Schedule of Appendix A are chargeable items under this arrangement and are not covered by the contract lump sum:

- FCU valve actuators, thermostats, damper actuators, fan motors, fan bearings, fan blades, compressors, main and auxiliary control boards, sensors, pressure switches, pressure transducers and thermistors.
- Replacement air filters – aluminium filter frames, G3 washable pleated filters, F7 synthetic media bag filters (cleaning of washable filters is included in the PPM; replacement media is chargeable).
- Ecology unit components – honeycomb filter cells, cathode supporting frame insulators, HV feed-through ceramic insulators, filter cell connectors, HV transformers, PCB circuit boards, cleaning and maintenance kits and activated carbon granules.
- Air curtain components – fan motors, impellers, control boards, speed controllers, contactors, isolators, capacitors, thermostats, bearing sets and cable termination kits.
- Cable joints and glass tube fuses beyond the minor consumable quantities held by MES.
- Compressors, Microprocessors, Refrigerant gas, recovery and re-charging.

### **13.0 WHAT IS INCLUDED IN THE CONTRACT PRICE**

---

- All labour, supervision, engineering and management for preventive, corrective and emergency maintenance, on an unlimited call basis.
- 24/7 emergency response, including Fridays and public holidays, in accordance with the agreed SLA.
- All tools, specialist testing instruments (including vibration meter, insulation resistance tester, clamp meter, anemometer, refrigerant gauges) and access equipment including ladders and mobile access platforms.
- All transportation, mobilisation and demobilisation.
- All PPE, barricading, signage and safety equipment.
- All consumables and cleaning materials: coil cleaning chemicals, degreasers, food-safe disinfectants, lubricants and grease, silicone, sealants, tapes, cable ties, cleaning cloths and cleaning water.
- Minor consumable hardware: V-belts, glass tube fuses, gaskets, cable ties, insulation tape and screws.
- Cleaning of washable and aluminium filters at every PPM visit.
- Cleaning of coils, drain pans, drain lines, U-traps and strainers.
- Motor insulation resistance testing and vibration measurement at every PPM visit, with recorded results.
- Airflow verification at grilles and hood faces, and minor exhaust adjustment.
- Grease trap cleaning and disposal of grease and solids at the designated area.
- Kitchen hood, grease filter, duct and exhaust fan degreasing, cleaning and disinfection – four (4) times per year, with certificate.
- High-Level Cleaning of the Ground Floor and First Floor – four (4) times per year, as detailed in Clause 4.4.
- Monthly inspection and reporting – twelve (12) times per year.

- All labour for removal, fitting, testing and commissioning of replacement spare parts.
- All reports, checklists, certificates, photographic records and the Annual Asset Condition Summary Report.
- Method statements, risk assessments, permit-to-work documentation and MSDS submissions.
- Gate pass and site access processing by the MES office.
- Third-party liability and workmen's compensation insurance.
- Rectification, at MES cost, of any damage caused by MES personnel during the execution of the works.

#### **14.0 WHAT IS EXCLUDED FROM THE CONTRACT PRICE**

---

The following are not included in the lump sum prices. Items marked (chargeable) can be executed by MES against a separate approved quotation.

##### **Spare parts and materials**

- All spare parts and replacement components, as listed in Clause 12.0 (chargeable at supplier invoice + 5%).
- Replacement air filters, bag filters, filter frames and activated carbon media (chargeable).
- Refrigerant gas, refrigerant recovery and re-charging (chargeable).
- Complete equipment replacement, or replacement of any unit assessed as beyond economical repair (chargeable).

##### **Works outside the maintenance scope**

- Motor rewinding, compressor overhaul and any workshop overhaul works. These are not preventive maintenance activities, are carried out off site at a specialist workshop, and will be quoted and paid for separately as and when required (chargeable).
- Major overhaul, retrofit, modification, upgrade, capital replacement or any new installation works (chargeable).
- FCU supply and return ductwork cleaning – not called for in Appendix A (refer optional Item 10.0).
- Full Testing, Adjusting and Balancing (TAB) of the air distribution system and issue of a certified TAB report (chargeable).
- Chilled water system flushing, chemical treatment and water quality management (chargeable).

##### **Equipment and systems outside the covered asset list**

- Walk-in chillers, walk-in freezers, catering and kitchen refrigeration equipment, and their doors, hinges, gaskets and lighting – referenced in the Appendix A Severity Matrix but not part of the HVAC scope (can be quoted separately).
- Plumbing works, sinks, drainage and water leakage from sanitary fittings (can be quoted separately).
- Building infrastructure, fire alarm and fire fighting systems, BMS software and network works.

- Electrical works upstream of the equipment local isolator, including distribution boards, sub-mains cabling, circuit breakers and earthing.
- Air curtains beyond the provisional allowance stated in Item 7 of the Bill of Quantities, pending confirmation of quantity, make and access.

#### **Builder's work and general exclusions**

- Civil and builder's work, false ceiling opening and reinstatement, coring, painting and making good of finishes.
- Provision of duct or hood access panels where none exist; these will be quoted separately if required to reach concealed ductwork.
- Scaffolding, rope access or powered access platforms beyond standard ladders and mobile access towers.
- Repair or replacement of damaged decorative finishes, glass, light fittings or furniture where the damage is pre-existing or caused by others.
- Rectification of pre-existing defects identified during the joint condition survey at contract commencement (to be quoted and agreed separately).
- Works arising from misuse, negligence or interference by others, unauthorised third-party intervention, vandalism, electrical surge, voltage fluctuation, water supply failure or force majeure.
- Permanently site-based (resident) manpower.
- Statutory authority approvals, third-party inspection and any government or authority fees.
- Any taxes or duties introduced after the date of this offer.
- Any works, systems or services not expressly listed in Clause 13.0 above.

#### **15.0 CLARIFICATIONS & QUALIFICATIONS**

---

- Asset schedule: Appendix A contains no equipment list. This offer is priced on the established asset base of 16 FCU, 2 FAHU, 2 ACCU, 2 Ecology Units and 3 Exhaust Fans. A joint asset and condition survey shall be carried out within fourteen (14) days of award, and the contract value adjusted pro-rata should the actual asset count differ.
- Air curtains: quantity, make and location are not stated in Appendix A. A provisional allowance for four (4) units has been carried at QAR 250.00 per unit per visit and will be reconciled against the confirmed count.
- SLA conflict: Clause 7 of Appendix A requires a four (4) hour emergency response while Clause 10 requires a fifteen (15) minute response and sixty (60) minute restoration. Our offer is based on the Service Level Agreement proposed in Clause 5.0 of this document, which shall govern.
- Resident manpower: this offer does not include permanently site-based personnel. The preventive works are scheduled activities and the corrective and emergency works are attended on a case-by-case basis by our standing maintenance team, supported by a 24/7 hotline. Site-based manpower can be quoted separately if required.

- Spare parts basis: this contract is comprehensive for labour, consumables and cleaning materials, and is NOT comprehensive for spare parts. Spare parts are reimbursable at supplier invoice plus 5% per Clause 12 of Appendix A. This differs from the fully comprehensive basis of our 2024 offer, and the pricing above reflects that change.
- Overhauls: our liability for overhauls arising from inadequate maintenance applies only to works demonstrably resulting from MES's failure to perform its contractual PPM obligations, and does not extend to pre-existing condition, age-related deterioration or the acts of others.
- Liquidated damages: Appendix A refers to Service Levels and Remedies but does not quantify any remedy. Any service credit or liquidated damages regime shall be mutually agreed and capped as stated in Clause 5.0.
- Access and shutdown: cleaning and maintenance activities requiring restaurant closure or equipment shutdown shall be carried out at times agreed in advance with the Duty Manager. Where night or non-trading-hour working is required, MES will accommodate this within the contract price provided reasonable notice and access are given.
- Personnel approval: the CV and certificates of the assigned HVAC Maintenance Supervisor will be submitted for QDF written approval prior to mobilization.
- Force majeure, changes in law and any QDF-instructed scope variation shall be dealt with as a contract variation.
- This proposal is to be read in conjunction with Appendix A. In the event of conflict, the clarifications and exclusions in this proposal shall take precedence.

## 16.0 COMMERCIAL TERMS

|                          |                                                                                                                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Contract Period</b>   | Three (3) years from the agreed commencement date.                                                                                                                                                                          |
| <b>Type of Contract</b>  | Firm fixed price contract, payable in Qatari Riyals (QAR).                                                                                                                                                                  |
| <b>Price Escalation</b>  | None. Prices are firm for the full three (3) year period.                                                                                                                                                                   |
| <b>Payment Terms</b>     | Quarterly invoice, payable within forty-five (45) days from invoice date. Spare parts and additional approved works invoiced separately on completion, payable within forty-five (45) days.                                 |
| <b>Mobilization</b>      | Within fourteen (14) days of receipt of the Purchase Order / Letter of Award.                                                                                                                                               |
| <b>Working Hours</b>     | Sunday to Thursday, 07:00 to 16:00 for scheduled activities, with night and non-trading-hour attendance as agreed with the Duty Manager. Emergency response 24 hours, 7 days a week, including Fridays and public holidays. |
| <b>Validity of Offer</b> | Thirty (30) days from the date of this proposal.                                                                                                                                                                            |

We trust the above meets with your requirements and we remain at your disposal for any clarification or for a joint site walk-through to finalise the asset schedule. We look forward to the opportunity of continuing to serve Qatar Duty Free at Harrods Tea Room, Msheireb.

Yours faithfully,

**Metri Engineering Services W.L.L.**

Fayez Metri (55572793 / 70500311)
